Statermanagement Accha hota bhoot

```
terraform {
  required_provider "azurerm"{}

  backend "azurerm" {
    resource_group_name = "rg1"
    storage_account_name = "stg1"
    container_name       = "cnt1"
    key                  = "tfstate.tfstate"
  }
}
```

Dependency in terraform

terraform apply

```
resource "azurerm_resource_group"
"hmarafirstblock" {
name = "hmarastatefileisemhoga"
location = "centralindia"
}
```

creating.....

```
resource "azurerm_resource_group"
"hmara2ndblock" {
name = "secondrg"
location = "centralindia"
}
```

creating.....

```
resource "azurerm_resource_group"
"hmara3rdblock" {
name = "thirdrg"
location = "centralindia"
}
```

creating.....

terraform mai jesa hi aap apply chalte ho sara k sara code parallel hi run hone lgta hai

Solution = Dependencies

Parallel Code chalne se rokne k liye hme dependencies pdna pdta hai

Resource Group

storage account

Container

Kitne type se hm aapne code mai dependency lga skte hai

implicit Dependency (Internal
Dependency)

```
resource_group_name =
"azurerm_resource_group.hmara1stblock.name"
```

Explicit Dependency (External Dependency)

meta Argument

depends_on = ""

```
depends_on =
[azurerm_resource_group.hmara1stblock]
```

Variable Block

variable "location" {}

- 1: declare (variable block declare krna)
- 2: Assign (Actual Value dalna)
- 3: use (kesa use krenge)

Declare

```
variable "locationWalaVariable" {}
```

Use

```
location = var.locationWalaVariable
```

Assign:

1: Cli

Assign:

2: -var "foo-bar"

```
terraform plan -var 'foo=bar'
```

```
PS E:\Dev\Devops\terraform\terraform-06-07-2026> terraform apply  
var.locationWalaVariable  
Enter a value: centralindia
```
