

Git & Github

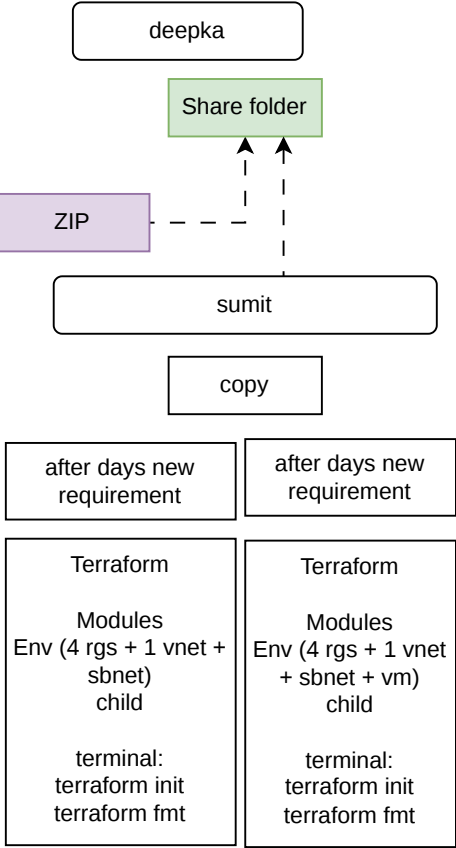

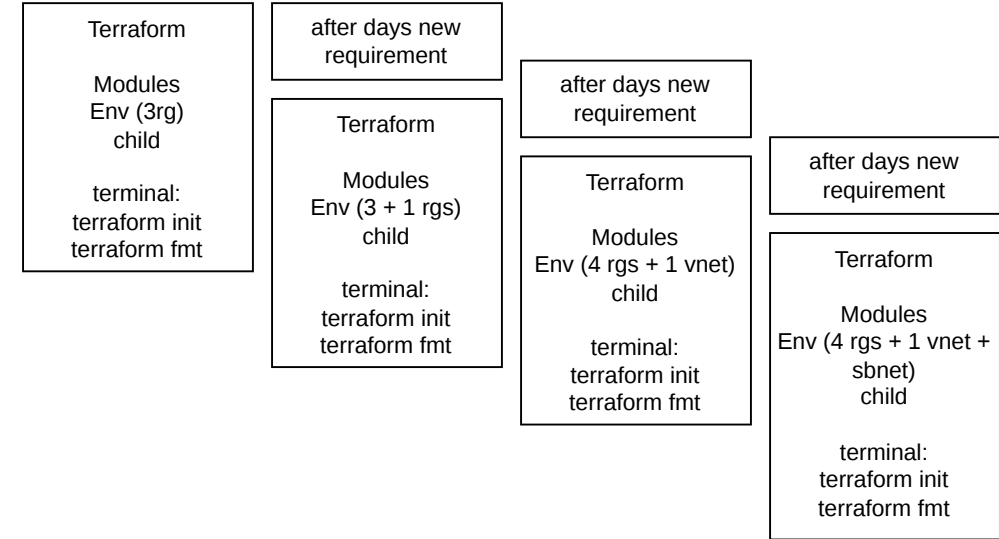

Terraform

Git:

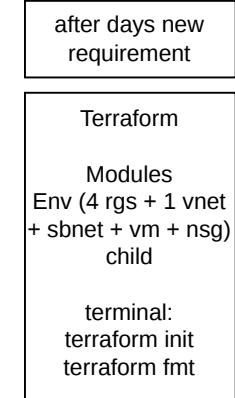

Devops: 1 Team member (Deepka)

Devops: 2 Team member (Deepka + sumit)

1 hour waster kiya fir jake aapko share folder mila

Devops: 3 Team member (Deepka + sumit) + Sharefolder ko manage krega

after days new
requirement

Terraform

Modules
Env (4 rgs + 1 vnet
+ sbnet + vm)
child

terminal:
terraform init
terraform fmt

version control nhi ho pa rha hai

security

rollback

Solution: SCM Source Code Management

github

azure devops

aws code commit

gcp source repo

ibm devops code

bitbucket

gitlab

Enterprise: Azure depeneded work -> azure devops
total requirement, extsiting infra

market reseach: github
community support
security

Github

repository

folder

project

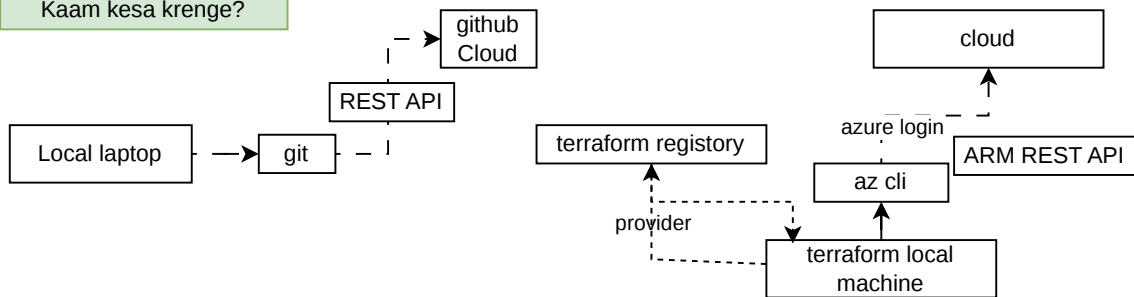

project 2

project 3

frontend

backend

Kaam kesa krenge?

What is the difference between git and github?

git -> tool (that help up to manger our code locally)

github is a cloud software, where we can store and manger our code

git help us to connect our local computer to the github

Who is going to manage your version control?

kon kr rha hoga version control?

git ki help hm local mai sare changes ko track krte hai

changes
v1
v2

github

debba -> repository

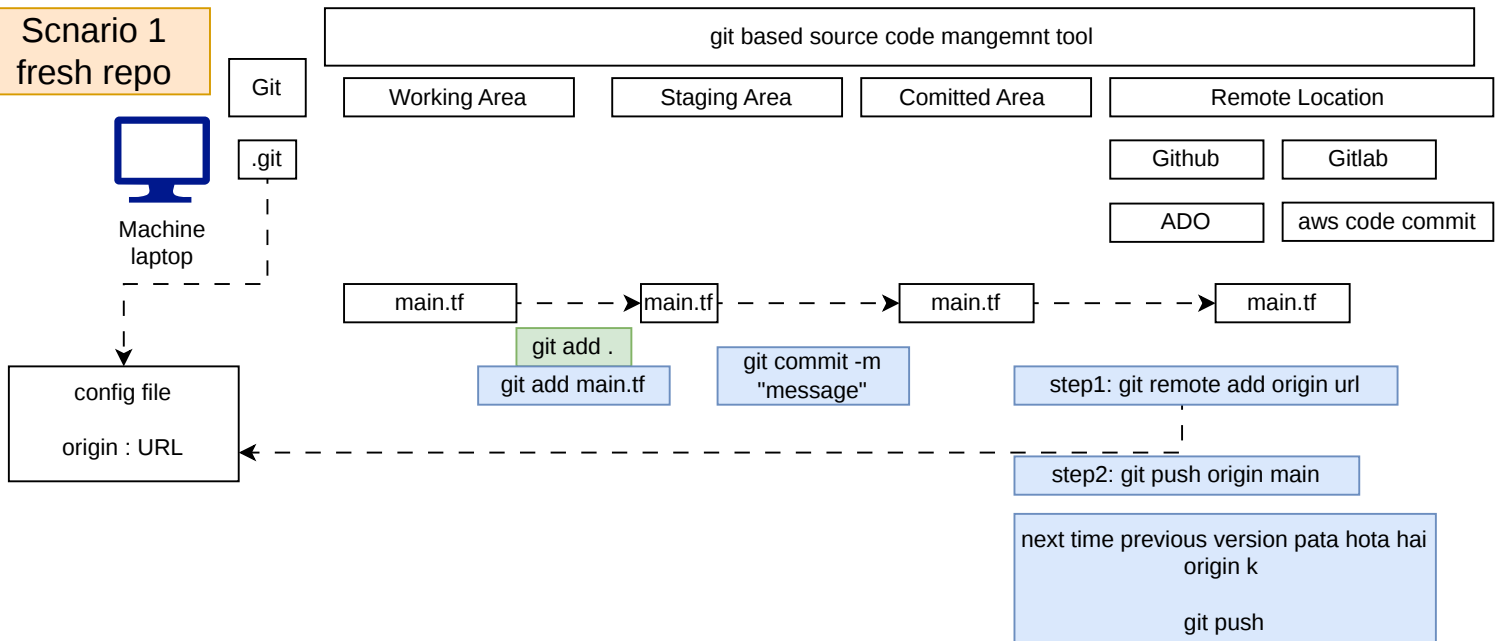

agr git hi version track kr rha hai toh ye track krta kha pr hai or kesa krta hai?
