

Azure - Private Endpoint / AWS - Privatelink

Background: Before Private Endpoint

Cloud Having two type of services

1: IAAS (infrastructure): Jaise VM, Private Network bnana pdta hai jisko kya bolte hai-Vnet, Subnet

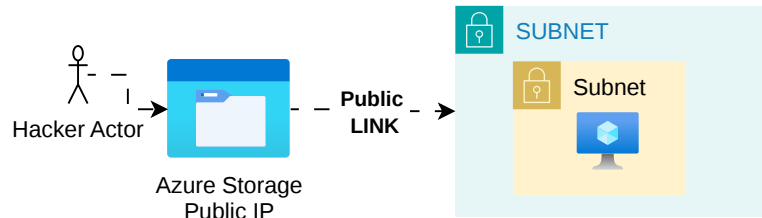

Options: Private IP and Public IP

Privacy: Private IP

2: PAAS (Platform): Jaise Azure Storage, SQL database

Options: Public IP, Public URL

Problem:

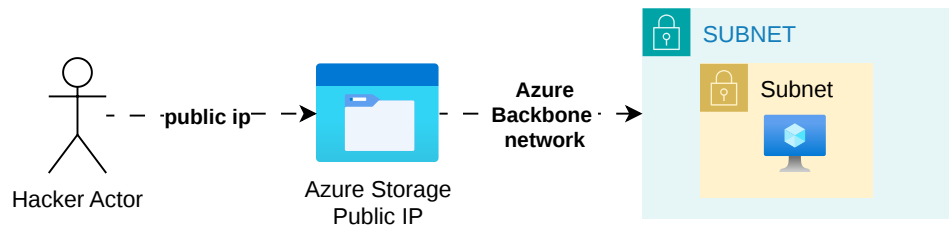

ISSES & OLD WORKAROUND

Security Risk: critical data hai

Compliance: koi bhi data aapke publicly accissible nhi hone chahiye.

OLD Workaround: Service Endpoint

traffic ko public internet par bhejnen k bajaye cloud provider ke aapne private underground fiber cable (backbone network) se bhejna shru kiya

Service Endpoint - Issues Kya tha:

Public Ip abhi vi assign hai PAAS service mai. and onprem se iko vpn se connect nhi kr payeneg bcz usme public ip hai

Private IP - Vnet (CIDR) Range

VM: ko private ip kon deta hai -> NIC

Private Endpoint: Private endpoint ek network interface (NIC) hai.
